

whereby, the movement of said gripping means along said elongated handle is confined by said two wrench heads.

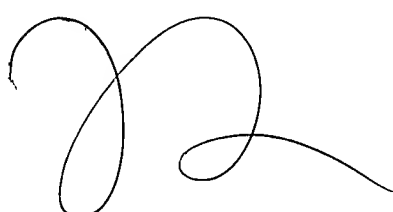

2. A double-ended wrench of claim 1, wherein said movable gripping means is frictionally attached to said double-ended wrench such that an application of predetermined force is necessary to render said gripping means movable upon said wrench.

~~4~~ 3. A double-ended wrench of claim 1, wherein said gripping means has at least one seam to facilitate attachment and detachment with said double-ended wrench.

~~3~~ 4. A double-ended wrench of claim 2, wherein said gripping means has at least one seam to facilitate attachment and detachment with said double-ended wrench.

~~4~~ 5. A double-ended wrench of claim ~~3~~ 4, wherein said gripping means comprises at least two interconnecting parts that are assembled together as one onto said double-ended wrench.

subca 6. A gripping means for a double-ended wrench having two

wrench heads positioned, one at each end of an elongated handle; said gripping means formed shorter than and for movement along said elongated handle whereby said gripping means is positionable at each end of said elongated handle without obstructing the other end thereof, said gripping means having a cavity therein with a central part and two ends, at least one of said two ends having a dimension greater than a dimension of said central part, and said central part having a dimension less than an outer dimension of each of said wrench heads whereby the movement of said gripping means along said elongated handle is confined by said two wrench heads.

10-7. A gripping means of claim ⁹8, wherein said movable gripping means is frictionally attached to said double-ended wrench such that an application of predetermined force is necessary to render said gripping means movable upon said wrench.

12-8. A gripping means of claim ⁹6, wherein said gripping means has at least one seam to facilitate attachment and detachment with said double-ended wrench.

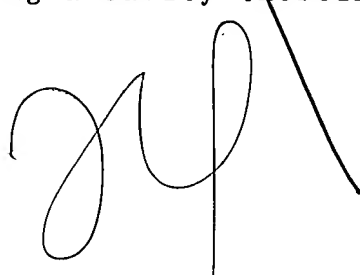

~~11~~ 9. A gripping means of claim ~~7~~¹⁰, wherein said gripping means has at least one seam to facilitate attachment and detachment with said double-ended wrench.

~~13~~ 10. A gripping means of claim ~~8~~¹², wherein said gripping means comprises at least two interconnecting parts that are assembled together as one onto said double-ended wrench.

11. A double-ended wrench comprising:

two wrench heads positioned, one at each end of an elongated handle; and,

a gripping means formed shorter than and for movement along said elongated handle whereby said gripping means is positionable at each end of said elongated handle without obstructing the other end thereof, said gripping means having an inner member and an outer member with said inner member formed to substantially encompass at least a portion of said elongated handle, and said outer member formed to substantially encompass at least a portion of said inner member, said inner member having a cavity therein with a

dimension less than an outer dimension of each of said wrench heads whereby, the movement of said gripping means along said elongated handle is confined by said two wrench heads.

12. A double-ended wrench of claim 11, wherein said movable gripping means is frictionally attached to said double-ended wrench such that an application of predetermined force is necessary to render said gripping means movable upon said wrench.

13. A double-ended wrench of claim 12, wherein said gripping means inner member has at least one seam to facilitate attachment and detachment with said double-ended wrench.

14. A double-ended wrench of claim 11, wherein said gripping means outer member is substantially elastic and continuous.

15. A double-ended wrench of claim 11, wherein said gripping means inner member has two ends, and said gripping

means outer member extends beyond at least one of said two ends of said gripping means inner member.

16. A double-ended wrench of claim 12, wherein said gripping means inner member has at least one seam to facilitate attachment and detachment with said wrench.

17. A double-ended wrench of claim 12, wherein said gripping means outer member is substantially elastic and continuous.

18. A double-ended wrench of claim 12, wherein said gripping means inner member has two ends, and said gripping means outer member extends beyond at least one of said two ends of said gripping means inner member.

19. A double-ended wrench of claim 13, wherein said gripping means outer member is substantially elastic and continuous.

20. A double-ended wrench of claim 13, wherein said gripping means inner member has two ends, and said gripping means outer member extends beyond at least one of said two

ends of said gripping means inner member.

21. A gripping means for a double-ended wrench having two wrench heads positioned, one at each end of an elongated handle; said gripping means formed shorter than and for movement along said elongated handle whereby said gripping means is positionable at each end of said elongated handle without obstructing the other end thereof, said gripping means having an inner member and an outer member with said inner member formed to substantially encompass at least a portion of said elongated handle, and said outer member formed to substantially encompass at least a portion of said inner member, said inner member having a cavity therein with a dimension less than an outer dimension of each of said wrench heads whereby, the movement of said gripping means along said elongated handle is confined by said two wrench heads.

22. A gripping means of claim 21, wherein said movable gripping means is frictionally attached to said double-ended wrench such that an application of predetermined force is necessary to render said gripping means movable upon said wrench.

23. A gripping means of claim **21**, wherein said gripping means inner member has at least one seam to facilitate attachment and detachment with said double-ended wrench.

24. A gripping means of claim **21**, wherein said gripping means outer member is substantially elastic and continuous.

25. A gripping means of claim **21**, wherein said gripping means inner member has two ends, and said gripping means outer member extends beyond at least one of said two ends of said gripping means inner member.

26. A gripping means of claim **22**, wherein said gripping means inner member has at least one seam to facilitate attachment and detachment with said wrench.

27. A gripping means of claim **22**, wherein said gripping means outer member is substantially elastic and continuous.

28. A gripping means of claim **22**, wherein said gripping means inner member has two ends, and said gripping means outer member extends beyond at least one of said two ends of said gripping means inner member.

~~29. A gripping means of claim **23**, wherein said gripping means outer member is substantially elastic and continuous.~~

~~30. A gripping means of claim **23**, wherein said gripping means inner member has two ends, and said gripping means outer member extends beyond at least one of said two ends of said gripping means inner member.~~
